

## NOTES FOR INCINERATOR WORK GROUP MEMBERS ON POSTINGS FOR FEBRUARY 5 IWG MEETING

### 1. REGULATORY ALTERNATIVES PAPER

This is a draft outline for our regulatory alternatives paper (RAP) that satisfies the basic requirements plus provides some additional information.

### 2. APPLICABILITY OF THE SOLID WASTE INCINERATION RULE

These draft materials are intended to illustrate how our regulations might be applied to the various incinerator and waste types. I have prepared these materials for discussion purposes and to give us some ideas about applicability. Ultimately, the IWG is free to adopt this approach or to take a different approach.

### 3. MILESTONE DATES RELEVANT TO WORK OF IWG

This draft table reflects my opinions about what dates must be met to keep our work on schedule. The milestones in the left-hand column are taken almost word-for-word from Table 4, PROPOSED REGULATORY DEVELOPMENT SCHEDULE, of the ICCR *Organizational Structure and Process* document.

### 4. EXAMPLES OF POTENTIAL INCINERATOR CONTROL OPTIONS

This draft list of incinerator controls that have been applied in the past is intended to give the subteams some ideas about the control options that “might” be considered. The list is probably incomplete, and you may know of other control options that should be added. Some of the control options on my list may not be applicable to particular subcategories due to cost or technical considerations or other factors. I have indicated what pollutants in my opinion may be reduced by these control options, but you may have different opinions about this.

### 5. INCINERATOR WORKGROUP SUBTEAMS

This is my latest list of subteam members and subcategories. Please let me know if you have any corrections or updates. If your name does not appear on this list, let me know which subteam you want to be assigned to.

### 6. UPDATE ON ICCR BULLETIN BOARD CONVERSION TO FULLY FUNCTIONAL WEB SITE

This is a copy of my e-mail message regarding the conversion of the ICCR bulletin board to a fully functional web site.

## 7. STATE REGULATIONS FOR INCINERATORS AND CAA SECTION 129 POLLUTANTS

This table summarizes State regulations that may be of interest to the IWG.

## 8. MATCHES

These Excel spreadsheets match emissions database IDs with facility IDs from the inventory and ICR/survey databases. Hopefully, this will help facilitate matching emission tests with facilities referenced in the other two databases.

## 9. GUIDANCE ON MACT DEVELOPMENT AND MODEL PLANTS

I have compiled here some MACT development and model unit materials made available previously to the IWG and ICCR. Many of you will already be familiar with these materials, but this may be new information to some of our newer members.
